## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over WALLACE 6,191,703 in view of SNYDER et al. 5,942,988.

WALLACE discloses a vehicle antitheft device mounted on a vehicle having a starter device (obvious part of internal combustion engine) that starts an engine when a collation between an in-vehicle equipment (62) and a portable equipment (14) through a radio communication is completed and an operation of a start operation is performed, the vehicle antitheft device actuating a predetermined theft preventing function so as to prevent the vehicle from being thieved, the vehicle antitheft device comprising: invehicle equipment current supplying means (90) for supplying an electric current to an in-vehicle electric equipment under a condition where said collation is completed before an engine start is performed by said start device in the vehicle; and activation limiting means for limiting an activation of said predetermined theft preventing function (col.1, line 67, col. 2, lines 1,2).

Application/Control Number: 10/540,274

Art Unit: 2836

WALLACE does not disclose theft preventing function when a current supply to said in-vehicle electric equipment by said in-vehicle equipment current supplying means started.

SNYDER et al. discloses current sensor (24) detects current flow in vehicles electrical systems generates a sensor signal in response to a detected condition as an input to the remote engine start controller.

It would have been obvious to one having ordinary skill in the art at the time of this invention to have modified the antitheft to have a current sensor to sense when the vehicle is in a running state and provide the limiting means for limiting the activation of said predetermined theft when supplying means is started to disable the antitheft when the driver activity is such that false alarms could be generated.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over WALLACE 6,191,703 in view of SNYDER et al. 5,942,988 in further view of JOHNSON et al. 5,977,654.

CLAIM 5.

for the antitheft system.

WALLACE in view of SNYDER disclose the vehicle antitheft device of claim 1.

WALLACE in view of SNYDER do not disclose a push –type start switch.

JOHNSON et al. discloses the remote control FAB 60 includes push button (64).

It would have been obvious to one having ordinary skill in the art to provide the

FAB to control the remote start disclosed by SNYDER to provide a remote start control

Art Unit: 2836

## Allowable Subject Matter

Claims 2,3,4,6,7,8 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication should be directed to Robert L.

DeBeradinis whose number is (571) 272-2049. The Examiner can normally be reached Monday-Friday from 8:30 am to 5:00 pm.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Michael Sherry, can be reached on (571) 272-2058. The Fax phone number for this Group is (571) 272-8300.
